

**MyAssessConnect**

# Assess the Way to Better Care with **MyAssessConnect**

The managed Software as a Service (SaaS) platform empowers care teams by offering complete visualization of a patient's assessment status and needs. ASAM CONTINUUM offers a comprehensive, multidimensional approach, evaluating factors like withdrawal potential and emotional conditions to determine the appropriate level of care. On the other hand, CO-Triage focuses on rapid assessment for quick decision-making, particularly useful in time-sensitive environments like emergency departments. Both tools emphasize individualized care and contribute significantly to a more systematic and effective approach to substance use disorders and addiction treatment.

## **MyAssessConnect Facilitates Assessment Access**

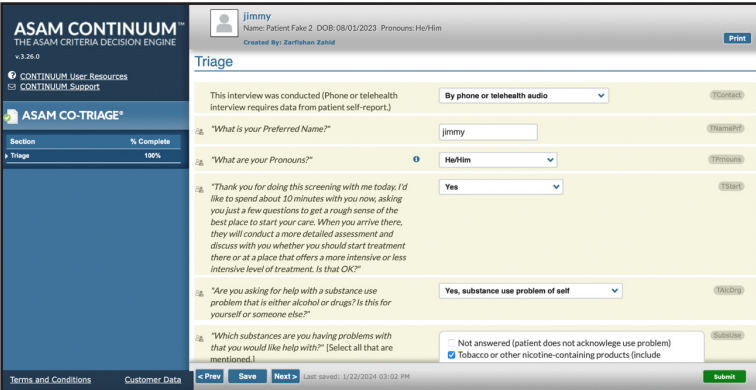

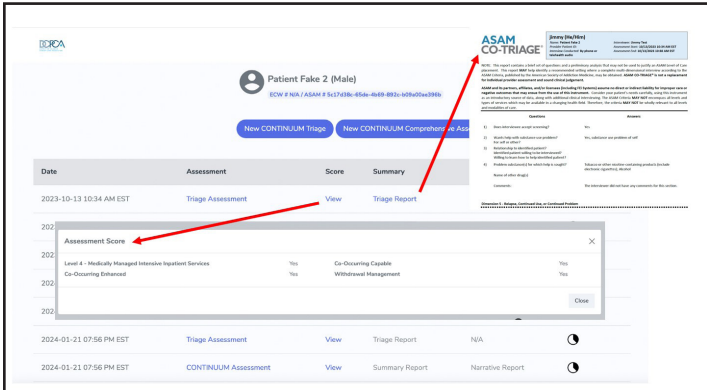

These assessments are accessible via electronic health records (EHRs) that serve as third-party distributors of the tool. However, not all EHRs distribute this tool, and some healthcare providers may not use EHRs at all, instead opting for care management platforms. The process for an EHR to become a third-party distributor can be lengthy and complex, potentially incurring costs for providers seeking this integration.

[Zane Networks](#) recognized these challenges and developed a solution that enables providers direct access to a wide variety of assessments. Called **MyAssessConnect**, the platform gathers meaningful data from these assessments – enabling care givers to improve the understanding of their patient populations and tailor treatment more effectively. This not only leads to the ultimate goal of enhanced health outcomes, but also opens the door to better contractual relationships with payers, as well as new funding opportunities.

## Assess. Visualize. Care.

The platform empowers care teams by offering complete visualization of a patient's assessment status and needs. MyAssessConnect...

- Enables access to both the ASAM CONTINUUM™ and CO-Triage® assessments. (Can be expanded to manage a wide variety of multidimensional assessments.)
- Provides reporting and analysis of assessment data and results.
- Is designed as either a stand-alone user interface (UI) or seamlessly launched within EHRs or other HIT systems.
