

Healthcare Management and Operations

*Smarter Systems.
Stronger Outcomes.
Coordinated Care.*

Zane Networks supports healthcare organizations in optimizing operations through a patient-centered, data-driven approach rooted in the Patient-Centered Medical Home (PCMH) framework. Our experts help providers improve care coordination, access, efficiency, and patient engagement — while aligning with value-based care.

Our Offerings At-a-Glance

- Certified PCMH transformation experts
- EHR/PM coaching for care coordination
- Patient engagement strategies and tools
- Value-based care alignment with payers
- Support for telehealth and extended access
- Preventive care program development
- Data analytics for continuous improvement

“

Our mission is to help healthcare organizations move from reactive to proactive care. By aligning technology, workflows, and patient needs we drive operational change that truly improves lives.

Core Service Areas

Patient-Centered Care Delivery

We support the design and implementation of care models that revolve around the individual—integrating primary care, behavioral health, and social services. Our PCMH-certified experts advise on team-based collaboration, holistic planning, and expanding access to wraparound services.

Coordinated Care Across Systems

Using certified EHR/PM coaches and proven strategies, Zane helps organizations ensure care continuity across providers and settings. Our work includes EHR integration, real-time information sharing, multidisciplinary case reviews, and structured follow-up protocols.

Proactive and Preventive Services

Zane supports the implementation of wellness screenings, immunization programs, and chronic disease management campaigns. We also assist in developing patient education tools that promote self-care and reduce reliance on acute services.

Access and Patient Engagement

We help expand access through telehealth, extended hours, patient portals, and digital care navigation. Our team also assists in developing engagement tools such as care managers, mobile apps, and SDOH support connections.

Data-Driven Decision Making

Zane empowers organizations to use real-time data for personalization and performance improvement. We support analytics setup, dashboard development, and quality tracking tied to patient outcomes, satisfaction, and cost.

Payer and Stakeholder Collaboration

Our team facilitates alignment with value-based payment models, chronic care initiatives, and payer collaboration efforts to improve quality while containing costs.

Zane Networks is committed to building stronger, smarter healthcare systems. Contact us to learn more about our healthcare management and operations services.

“From care coordination to community connection, Zane brings patient-centered innovation to every layer of operations.”
